Economic burden of rare disease reached nearly $1 trillion in the U.S. in 2019

**DIRECT MEDICAL COSTS**
Includes inpatient hospital or outpatient care, physician visits, Rx medications, durable medical equipment.

**INDIRECT COSTS:**
PRODUCTIVITY LOSS
Includes forced retirement, absenteeism, presenteeism, and a reduction in community participation and volunteer service.

**NON-MEDICAL & UNCOVERED HEALTHCARE COSTS**
Includes paid daily care, necessary home and vehicle modifications, and transportation and education costs. Also includes healthcare services not covered by insurance: experimental treatments, medical foods, and more.

**Total Economic Burden of Rare Disease in the U.S in 2019:**
$966 Billion

**Leaving Cost Components**

- **$418 Billion**
  **DIRECT MEDICAL COSTS**
  Includes inpatient hospital or outpatient care, physician visits, Rx medications, durable medical equipment.

- **$437 Billion**
  **INDIRECT COSTS: PRODUCTIVITY LOSS**
  Includes forced retirement, absenteeism, presenteeism, and a reduction in community participation and volunteer service.

- **$111 Billion**
  **NON-MEDICAL & UNCOVERED HEALTHCARE COSTS**
  Includes paid daily care, necessary home and vehicle modifications, and transportation and education costs. Also includes healthcare services not covered by insurance: experimental treatments, medical foods, and more.

**ABOUT THE NATIONAL ECONOMIC BURDEN OF RARE DISEASE STUDY**
This study, conducted by the Lewin Group on behalf of the EveryLife Foundation for Rare Diseases, is the first of its kind, providing the most comprehensive assessment of the total economic burden of 379 rare diseases in a single year. This study identified direct medical costs, via an analysis of claims data, and indirect and non-medical and uncovered healthcare costs, via a survey of 1,399 members of the rare disease community.

**The National Economic Burden of Rare Disease Study is a defining moment in a decades-long effort to overcome the challenges of rare diseases. This new economic evidence can guide policy decisions with real and lasting benefits for families and society. We must act on it.**

Mark Dant

The EveryLife Foundation for Rare Diseases
Father of a son with a rare disease
The financial challenges are overwhelming and unrelenting. The search for a diagnosis or treatment requires navigating a complex medical system and battling with insurance companies – all while trying to hold down a job.

Marissa Penrod
Founder, Team Joseph
Mother of a son with a rare disease

What Do the Study Findings Mean?

Within the rare disease community, it has been well understood that the costs of living with a rare disease, both economic and social, are immense. Yet, no one has previously examined the true cost at scale in the US. Determining the true economic cost of rare diseases equips the rare disease community with new tools with which to increase awareness of the public health crisis of rare disease, inform policy proposals, and improve the lives of patients and their families.

HOW CAN I GET INVOLVED?

Addressing the full range of needs codified by this study will require a collaborative effort. The scientific community, policy makers, healthcare providers, payers, employers, and others, all have a role to play to identify innovative new ways to improve the care and treatment of rare diseases.
